rop-workflow · main · commit 852b2b1 · 5 Nov 2026, 17:26

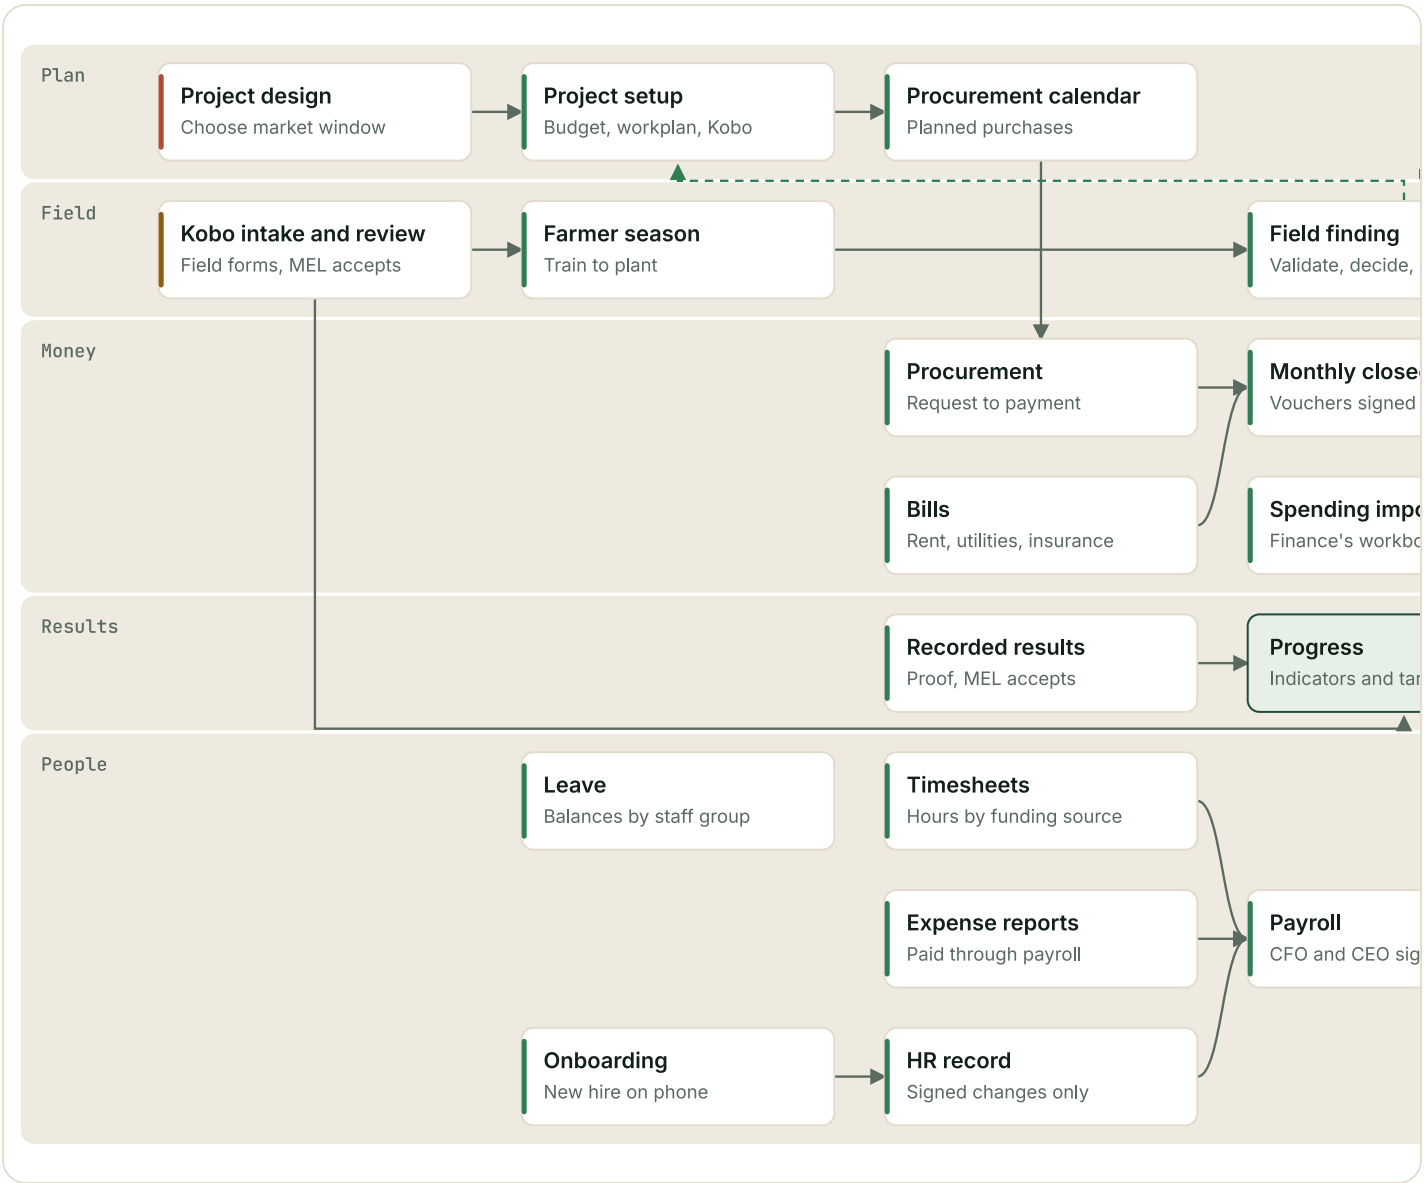

ROP Workflow Map

Every workflow in the code today, who acts at each step and how one hands off to the next. "Built" means the screens and rules exist. It does not mean field tested.

21 workflows **18** built and saved **1** partly built **2** in one browser only

How it all connects

Select a box to jump to its steps. The dashed line is the learning loop into next season's plan.

What the map shows is missing

No screen adds a farmer

Farmers arrive only through Kobo forms. A Register a farmer button that opens the Kobo form closes this.

Three Kobo forms are not built

Only the readiness form exists. Training, input distribution and field visit are planned, so those steps are recorded by hand in the app.

Two report sign-offs exist

The quarterly report saves to the database. The older Project records sign-off saves in one browser. One should go before anyone relies on it.

Monthly review is not shared

It lives in Project records, so a decision made on one laptop is invisible on another. Budget and design data there have the same limit.

Finance links are typed by hand

SharePoint links and NetSuite references are entered by Finance. Nothing checks that they exist. Procurement documents are not filed automatically.

Both ends of the project are missing

Opportunity go/no-go, proposal and mobilization are mapped in the draft but not built. So is project closeout. Monthly closeout is a finance step.

The AI assistant is a shell

The button opens a panel, but it does not answer yet. Claude's real work today is drafting procurement documents, checking them and drafting report text.

My time and costs show for everyone

Anyone without an HR record sees pages that do not apply to them.

Every workflow, step by step

The left edge of each step shows who acts. ◆ marks a decision or approval the work cannot pass without.

Show steps for Everyone | Field staff | MEL | Managers and approvers | Procurement | Finance | HR | Any staff member | Claude

Plan a project

Project design

Saved in one browser only

`Home → /design`

The grapes project starts here. The market calendar uses sample data for now.

Pick the crop — Project team → Read the market calendar — Project team → Validate a window with sources — Project team → Choose target and reason — Project team → ◆ Sign off Design — Plan approver → Move to Execute — App

Project setup

Built, saved to database

`/setup`

A step-by-step wizard. Kobo connection can be skipped.

Name, country, crop, dates — Admin → Goal and indicators — Admin → Donors — Admin → Review — Admin → Budget — Admin → Workplan — Admin → Connect Kobo — Admin → Link forms — Admin → Map questions to indicators — Admin

Procurement calendar

Built, saved to database

`/work/plan`

Turns each budget line marked to buy into a planned purchase with a start date.

Built from budget and workplan — App → Review dates and method — Procurement → ◆ Approve — Procurement manager → ◆ Approve — Technical lead → Appears on Work calendar — App → Start the purchase — Budget holder

↳ Sent back: returned with a note, then revised.

Field delivery

Farmer season

Built, saved to database

`Work → Field activities, /field/farmers/[id]`

One farmer moving through one season. Training needs enrollment and the farmer's contribution first.

Train
Extension
→ Prepare the plot
Extension
→ ◆ Verify readiness: Yes or No
MEL
→ Distribute inputs
Store
→ Plant and follow up
Extension
→ Complete
App

↳ No at readiness: 7-day deadline → Correct and recheck (Extension).

↳ Recheck Yes: back to Distribute. Still not ready: manager removes the farmer or extends 7 days.

Kobo intake and review

Partly built

`KoboCollect → /progress`

The readiness form is built. Training, distribution and field visit forms are still planned. Data forms skip the review queue and count through question mappings.

Pick farmer, fill form offline
Field worker
→ Send from KoboCollect
Field worker
→ Live push or Sync brings it in
App
→ ◆ Accept or query
MEL owner
→ Readiness result moves the farmer
App

↳ The app pushes the farmer list to Kobo: ID, village and initials, never names.

Field finding

Built, saved to database

`Work → Start new work`

Something seen on a visit becomes a decision with an owner.

Record what you saw
Field staff
→ ◆ Validate
MEL
→ ◆ Decide: act or close
Manager
→ Carry out the action
Named owner
→ Feeds next season's plan
App

Money

Procurement, request to payment

Built, saved to database

`Work → Procurement`

Up to 27 steps depending on size (table below). Claude drafts the documents and flags problems. A person decides at every step.

Confirm need and requisition
Budget holder
→ ◆ Approve requisition
Approver
→ Choose how to buy
Procurement

→ Quotes, or solicitation and bids
Procurement
→ Draft documents, check for gaps
Claude
→ Evaluate
Bid committee
→ Screen supplier
Procurement
→ ◆ Approve award
Approver
→ ◆ Contract and signature
Procurement, approver
→ Receive and inspect
Budget holder
→ Package and payment form
Procurement
→ ◆ Check payment
Finance
→ ◆ Approve payment
Approver
→ Voucher and record payment
Finance
→ Close out
Procurement

↳ Instalments: receipt through payment repeats once per instalment.

↳ Tax: withholding is 2% with a valid licence and 7% without, checked on the payment date.

Bills paid directly

Built, saved to database

`/work/bills`

Rent, utilities, insurance and similar. A one-off purchase goes through procurement instead.

Record bill with document
Finance or bill entry
→ ◆ Approve
Management, not the recorder
→ Prepare voucher
Finance
→ File in SharePoint, post in NetSuite
Finance

↳ Returned: sent back with a note.

Monthly closeout

Built, saved to database

`/work/closeout`

Vouchers from procurement and bills, checked the same way.

Vouchers grouped by month
App
→ Blockers listed
App
→ Finish, file and post each one
Finance
→ ◆ Sign off the month
Finance

Spending import

Built, saved to database

`/progress/records`

Reads only the budget sheet of Finance's monthly workbook, so staff pay lines are never stored. An import with problems is refused.

Finance sends monthly
◆ Import and check
Budget against actual shown

workbook
Finance
→ Spending importer
→ App
→ Feeds the quarterly report
App

Results and reporting

Recorded results

Built, saved to database

/progress/results

For projects without Kobo forms, such as ACRP. Only accepted results count.

Record result with proof
Staff
→ ◆ Accept or query
MEL owner
→ Counts in Progress and report
App

Quarterly donor report

Built, saved to database

/progress/report

Every figure comes from accepted records and opens the evidence behind it.

Figures built from accepted results
App
→ Draft narrative
Claude
→ Edit text and statuses
Report writers
→ Fix anything blocking release
Report writers
→ Download for Word
Report writers
→ ◆ Release as final
Report releaser
→ Donor can see it
App

Project records

Saved in one browser only

/progress/records

The older screen: plan, monthly review, report sign-off and audit trail. Its content still shows demo items such as the March report.

Monthly review drafted
Claude
→ ◆ Decide proposed changes
Monthly reviewer
→ ◆ Approve actuals
MEL owner
→ ◆ Sign and release report
Report releaser

People and pay

Onboarding

Built, saved to database

`/onboarding`

Done mostly by the new hire on a phone. Each signature records the exact file that was read.

Start with the contract — HR → Contact and bank details — New hire → Sign contract — New hire → Upload ID — New hire → Acknowledge each policy — New hire → Add to HR record — HR → Email and equipment — HR → ◆ Security briefing and induction — Supervisor

HR record changes

Built, saved to database

`/people`

Nothing is edited directly. Each change is a signed proposal. A nightly seal fingerprints the ledger.

Propose a change — HR → ◆ Approve pay, hire or leaving — CFO then CEO → Takes effect on its date — App

↳ Job change or separation: CEO. Contact details and leave adjustments: a second HR officer.

↳ Authority table: CEO and board. A conflict sends the step to the board.

Timesheets

Built, saved to database

`/timesheets`

Hours by funding source, leave and allowance days. A revision after approval is flagged and approved again.

Submit the month — Staff member → ◆ Approve or return — Line manager → Sets the funding split for payroll — App

Leave

Built, saved to database

`/leave`

Balances are worked out from the rules for Home Office, expatriate, Afghan and Guatemalan staff.

Request leave — Staff member → ◆ Approve or return — Line manager → Balance updates — App

↳ Unpaid, parental or Hajj leave also needs HR.

Expense reports

Built, saved to database

`/expenses`

Per diem, mileage and receipts. Finance can also enter a signed paper claim. Someone else then accepts it.

Submit with receipts — Staff member → ◆ Approve or return — Line manager → ◆ Check receipts and codes — Payroll → Paid in next payroll — App

Payroll

Built, saved to database

`/payroll`

Worked out from the HR record and approved timesheets. Files go to ADP RUN for the Home Office and the bank for Afghanistan.

Register worked out — App → Add adjustments with reasons — Payroll → ◆ Approve — CFO → ◆ Approve — CEO → Download payment files — Payroll

Running the system

Work hub

Built, saved to database

`/work`

The front door. Added today. It starts a task, a procurement request or a field finding. Timesheets, leave and expenses open from Home.

Start new work — Staff → My tasks — Staff → Active workflows — Staff → Needs my attention — Staff

Rules and people

Built, saved to database

`/settings`

Organization and donor rules set the procurement limits and checks. Roles decide who sees and signs what.

Set organization policy — Admin → Apply donor rules per project — Admin → Assign people and roles — Admin

Which procurement steps apply at each size

Thresholds come from ROP policy and can be changed per project in the rules screen. Sole source skips the competitive steps and adds its own justification and approval. The CEO approves large awards and sole sources.

Step	Who	Micro	Small	Medium	Large
